

# Horse Grooming Tools

A curry comb is used first to loosen dirt, hair, and debris from the horse

A hard bristle brush is used next, to remove the dirt and loose hair

A soft brush is then used to smooth the coat, and it helps disperse the horses natural oils

A horses mane and tail should be brushed to remove debris, and tangles. A mane and tail brush is used for this.

A hoof pick is used to clean out the horses hooves. There are areas in the hooves that get dirt in them, and they need to be cleaned daily.
