

Math – Grade 6

Welcome to 6th grade math! My name is Heather and I am going to try to help your child understand math and how it is applicable in our everyday use. This is a 6-week course to help you and your child with their math lessons that should carry out through their school year. If at any time you feel that your child is struggling you can email me at: wholefoodslifestyles@gmail.com for addition help or feel free to try a lower grade level course. No one says just because your child is a 6th grader they have to struggle and be miserable with 6th grade math. Lessons should be a challenge but not so difficult that they become overwhelmed and frustrated. Again, these are only 6-week courses and they can always come back to higher grade level later. I am available by appointment for tutoring help all school year. With that said, if you have a child who is excelling at math, feel free to extend their learning with more complicated problems or a higher grade math (if available). Please email at the above address with any questions, comments, or concerns. I am so excited! Let's get started with week #1!
