

# Math – Grade 5

Welcome to 5<sup>th</sup> grade math! My name is Heather and I am going to try to help your child understand math and how it is applicable in our everyday use. This is a 6-week course to help you and your child with their math lessons that should carry out through their school year. If at any time you feel that your child is struggling you can email me at: [wholefoodslifestyles@gmail.com](mailto:wholefoodslifestyles@gmail.com) for addition help or feel free to try a lower grade level course. No one says just because your child is a 5<sup>th</sup> grader they have to struggle and be miserable with 5<sup>th</sup> grade math. Lessons should be a challenge but not so difficult that they become overwhelmed and frustrated. Again, these are only 6-week courses and they can always come back to higher grade level later. Likewise, if they feel this is too easy for them, try bumping them up a level. Again, you can use lesson from all grade levels to fit your child's needs. I am available by appointment for tutoring help all school year (cost \$10 per 30 minute lesson – same as live classes). Please email at the above address with any questions, comments, or concerns. I am so excited! Let's get started with week #1!
